Steve & Will,

At the site visit in fall 2000 I found the calcareous fen (listed rare community) and at least one Special Concern plant, Ohio goldenrod (*Solidago ohioensis*). I forwarded them to BER but they may not be in the current Spring 2001 NHI database.

But have a good holiday first -- Joanne

Haven't seen it yet. I'll be out there tomorrow since I'll be doing Blanding's turtle work anyway.

There are no recorded occurrences of terrestrial E/T species within 3 miles of the impoundment. There are some aquatics here and downstream:

T R S  
10 19 24 Ellipse mussel, *Venustaconcha ellipsiformis*, Threatened, 1977  
10 19 14 Lake Chubsucker, *Erimyzon sucetta*, Special Concern, 1978  
location listed as "Mayfield Pond -- Cedar Creek"  
10 19 13 Lake Chubsucker, . . . in Tilly Lake

Joanne
